

Rebus Technology

Founded in 1990, Rebus Technology specializes in the development of information management and document image management technologies and products. Recollect, its banner suite of Information management software, is preferred by small and large businesses, as well as single users, for its electronic filing and retrieval capabilities. Recollect allows users to manage all types documents, from paper to electronic, on a stand-alone PC or a global server. Recollect is a recipient of Imaging Magazine's Technical Excellence award.

Founder and President Vijay Rangarajan is the chief architect for Rebus Technology and lead designer of the Recollect suite. A key player in image processing and pattern recognition technology development since 1983, he has designed and managed the development of numerous breakthrough technologies in the field of scanning, OCR, and document management. A co-author of the original TIFF specification, Mr. Rangarajan is the former Project Manager at Caere Corporation, where he participated in the design and management of OmniPage, one of the industry's most successful.

This design resulted in PC Magazine's Technical Excellence Award. While working with DEST Corporation, he was instrumental in the design of software for the first successful desktop scanner in the industry. Recollect leads the competition with such outstanding patented features as Fuzzy Search and Indexing and Automatic Page Registration.

Vijay Rangarajan's degrees include: Bachelor of Electronics from Bangalore University; Master of Engineering in Electronics from the University of Madras; MSEE from the South Dakota School of Mines and Technology.

How would you like to manage, store and find all of your paper and electronic documents FAST? That means taking a stack of those important paper and electronic documents and turning them into a collection of active documents, where any portions can be accessed and edited in seconds. We live in an information-centered economy that relies on paper, fax, and the Internet. Your organization's survival depends on more than just having the tools to manage that information; it bets the farm on the ability to retrieve and manage it quickly and efficiently. Failure to do so can be disastrous.

Rebus Technology has designed Recollect to tackle your most pressing information management requirements. Recollect retains the original of a document forever safe, while an editable copy is automatically made. And then allows you to find that same document—a medical record, a legal contract, an invoice, résumé, whatever—simply by typing one word or phrase, a name, diagnosis or invoice number—even invoices between certain dates.

Let's say you're looking for someone named Stan Brown, but the name has accidentally been entered it as Stanbrown or Btan Srown. With Recollect, there's no problem. Recollect will instantly detect any document containing that name, whether spelled correctly or not. We call this patented innovation the Recollect full-text True Fuzzy Indexing and Searching, and it's only one of the exciting features setting us apart from our competition.

Whether your company is a financial institution, hospital, law office or university, your people will enjoy the fastest and easiest management of all paper-based and electronic documents.

When you're tired of filing cabinets and want to retrieve all of your information in a split second, and not from a metal filing cabinet but from a CD-ROM, let us know and we'll tell you about Recollect.

Recollect. The engine that drives your information. Paper, Fax, HTML, PDF, Word, Excel and PowerPoint. Email attachments, image files, microfilm, microfiche. Recollect organizes all that information within an electronic archive so that you can locate and retrieve any filed information without a hitch.

Information Management Technology Just Hit Its Stride. Are you tired of searching through paper and fax-based documents, only to be thwarted by typos and run-on words? The Rebus patented, full-text True Fuzzy Search and Indexing technology allows you to find any document—paper, spreadsheet, text, fax, graphics, you name it. No matter when it's been stored, or where. And you can do so without sacrificing vital formatting information. Imagine.

Recollect is your most efficient program for managing all your paper-based and electronic documents. No matter what it is or where you are, you simply scan or import your documents into Recollect and you've got information you can use and edit instantly. Need to copy or move that information to ZIP, JAZ or CD-ROM? Recollect guarantees you a fully indexed and portable archive of all your vital information.

Tired of losing formatted information?

Whatever you're importing—fax, memo, photo or business cards, word-processing, Spreadsheet, text and graphics files; even video or sound—it can be scanned or imported and then managed in Recollect. And whether it's scanned or copied, everything gets organized. That's because Recollect supports more than 300 of the most popular TWAIN and ISIS scanners and Digital Copiers.

So how many steps are we talking about? One That's right, one step and you're finished. Put the document in the Digital Copier/Scanner. Okay, two steps, if you count pushing the button. In a matter of seconds your documents are automatically indexed, filed, ready for retrieval. Where do the documents go? Wherever you decide! And that includes removable media and/or network storage, which adds speed and portability to your filing system.

Retrieval that's just as fast.

When you want to retrieve that document, type in any word and it's there. That's because Recollect has automatically created an index of every significant word on every page using its built-in OCR (Optical Character Recognition) capability. What you get is not some confusing coded response, but a prioritized list of every document that meets your criteria and a thumbnail view of each one. And any document in which the word or phrase is found is ranked in order of relevance (determined by the number of times the word appears). Click on the one you need and you'll see the full page, with the search word(s) highlighted.

OCR Errors? Not a problem!

If you're concerned about errors, rest assured. Recollect is designed with a patented True Fuzzy Search technology that not only compensates for OCR errors, but also finds even those documents with misspelled, fragmented or run-together words. No struggling over bad translations or obscure input software. Recollect speaks a universal language.

Our awards are well-earned.

When Imaging Magazine conferred on Recollect its Technical Excellence Award, the business world took note. For more than a decade, our team has been developing the most innovative information management technologies and product lines. Our founder was co-author of the original TIFF specification, as well as project leader of the first design team credited with OmniPage. You could say that our team has cut its teeth on the highly competitive world of information management.

You'll recognize us anywhere!

Recollect has taken the look and feel of Windows Explorer and turned it into a highly functional system. Your documents are stored in the same style hierarchy, meaning you'll recognize the icons. Whether it's folders, file names or drives, it's your desktop all over again. Only this time, you can Include or Exclude entire drawers from any storage media, including the removable type like CD-ROM, and DVD.

Document storage that's portable, unlimited, fast...and shared!

If you need documents to be searchable and portable, Recollect is the answer. Copying, moving or renaming documents, it's all the same: fast and accurate, just drag and drop them. And should you choose to share your information, you can do it easily over a networked Recollect Server. That means not only the ability to reorganize all your documents, but to back everything up to removable media. Finally, you'll never run out of disk space because Recollect supports all Windows-compatible storage devices, including removable media like CD-ROM, DVD and ZIP.

Horizontal Markets and Vertical Solutions. Recollect covers them all.

Nothing comes through like Recollect for horizontal markets and vertical Solutions. Whatever service your company provides, and whichever programs are being used for storing its information, the ability to access that information quickly and effortlessly makes for a better business. Here are a few of the customer bases served by Recollect:

Doctor's offices and hospitals

Patient records stored twenty years ago or last week can be retrieved in seconds. Law firms and corporate legal departments-Contracts and agreements, RFP's and human resource information, Recollect means immediate access for optimum efficiency.

Financial Institutions

Banks, mortgage and loan companies, S&L's or title companies, information going back a full century can be accessed using Recollect Educational institutions-Colleges or universities, three hundred students or thirty thousand, every transcript, student history, publication and archive is only seconds away when Recollect products are in place.

Library of Congress or public library

Searching for Constitutional amendments or Cat in the Hat, Recollect retrieves it all in seconds. Manufacturing companies-Contract manufacturing or a local bicycle maker, Recollect solutions make certain that parts, labor and invoices are stored and accessed with accuracy.

When it comes to information management, we deliver real value to your business.

Recollect OCR 6.2

How would you like to convert all of your paper documents into editable text? And then be able to find that document—a legal contract, résumé, marketing collateral, whatever—simply by typing one word or phrase? Recollect OCR 6.2 is a next generation OCR application that not only provides you with a very accurate text conversion capability, but also introduces you to the exciting world of Information Management with full-text fuzzy search capability. With Recollect OCR 6.2, you can restrict your search to one file or you can expand it to a folder, or many, even your entire computer system. Not only are documents with incorrectly entered names and words instantly found, but built-in Backgrounder automatically launches the scan/search application..

Recollect Courier Upgrade 6.2

If you'd like to take all of the features of Recollect OCR 6.2 and add exciting document management capabilities and be able to connect to a server, upgrade to Recollect Courier Upgrade 6.2. This upgrade will enable you to create and transfer documents with ease between the server and your personal computer.

Recollect Courier 6.2

Whether you're working on your laptop at 35,000 feet or you're back in your office connected to a Recollect Server, Courier 6.2 answers your document filing and retrieval needs. This is a powerful OCR, scanning, indexing, storage and intelligent retrieval application software. When connected to a Recollect server, it can be operated as a stand-alone application or as a client computer.. On the go or at your desk, you can move documents back and forth, between your PC and the server. This application supports a rich set of features, in addition to the ones provided by Recollect OCR 6.2. What does this mean? If you're connected to your Recollect Server, you can also access every document stored on your network. When you leave the office, the information goes with you. So whether you need to manage information on your notebook or laptop, or access the information from your network servers, you can do it in a flash. Recollect Courier 6.2. (For more detailed features, please read the specifications sheet.)

Recollect Enterprise 6.2

This is the heart and soul of the Recollect product line of search and-retrieval technology. Small business or large, the three components that comprise Recollect Enterprise 6.2 will revolutionize your business and the way you look at information retrieval.

a) Enterprise Server- No matter what size your business, you'll appreciate the multi-user networking capabilities of Recollect Enterprise Server 6.2. From user administration to document sharing, security administration to mail management, you can be confident of finding any information, anytime, anywhere. We designed this as a distributed server, web-enabled application for multi-users operating in the Microsoft NT/2000 or Novell Network environment. What's more, this product delivers the versatility of Java-based multi-platform client support, HTTP/XML Connector capabilities, and easy integration with a wide range of non-Recollect applications such as ERP, CRM, EMR and SFA.

b) Officemate Client 6.2- This application is designed for users who need to scan, index, store, search and/or retrieve information. And you never have to worry about installing it on your client computers because it resides in the server. How does that benefit you? For one thing, it doesn't require you to install it on every computer on the network. It will also allow you to log on to the network from any client computer and provide access to your documents with the same personalized settings. Whenever you need Officemate, it will be loaded automatically from the server so that you can retrieve any information, from any document, located anywhere on the server. What you save is time, stress and money.

c) Retriever Client 6.2- This application operates similarly to Officemate except that it is designed for users who need to search and/or retrieve information. Retriever allows you to search and retrieve the information that you've entered into your system using Officemate or Courier. Thanks to our unique patented True Fuzzy Search logic or Keyword Search, you can also retrieve and read all of your documents. Even those with typos!

Recollect Web Server and Web Retriever

This two-component Java based Web Server application allows you to access all of your documents stored on the Recollect Enterprise Server from the Internet, no matter where you are in the universe. In terms of function, Web Retriever is identical to Enterprise Retriever, except that the latter is not Internet-enabled.
